

Name _____ Period _____

Skill 19.1 Exercise 1

The code below has errors. Fix the code.

```
num_cameras = {"backyard": 6 "garage": 2 "driveway": 1}
```

Create a dictionary called sensors that keeps track of the temperature in different rooms of a house. Assign the “living room”, “kitchen”, and “bedroom” to 21, 23, and 20, respectively.

Skill 19.2 Exercise 1

Create a dictionary called translations that maps the following words in English to their definitions in Sindarin (the language of the elves):

English	Sindarin
mountain	orod
bread	bass
friend	mellon
horse	roch

Skill 19.3 Exercise 1

The code below results in an unhashable error. Explain why, along with how you would fix the code.

```
children = {["Johannes", "Rosmarie", "Eleonore"]: "von Trapp", ["Sonny", "Fredo",  
"Michael"]: "Corleone"}
```

Name _____ Period _____

Skill 19.4 Exercise 1

Create an empty dictionary called *zoo animals*. Then add 8 zebras and 12 monkeys.

Skill 19.5 Exercise 1

Use the *update* method, to add the following animals to the *zoo_animals* dictionary above: 4 lions, 10 kangaroos, 4 red pandas

Skill 19.6 Exercise 1

Below is a dictionary that stores some summary statistics,

```
stats = {  
    "mean": 72.4,  
    "median": 70.0,  
    "std": 8.1  
}
```

Write a function called *update_stats* that takes three parameters: *dict*, *stats*, *value*

In the body of the function use the parameters to update the specified stat in the dictionary with the correct value.

Call the function you wrote above. Update the *mean* in *stats* to 69.5.

Name _____ Period _____

Skill 19.7 Exercise 1

The lists below show cities and the corresponding temperatures.

```
cities = ["NYC", "LA", "Chicago", "Houston"]  
avg_temps = [70, 75, 65, 80]
```

Use a *dict comprehension* to create one dictionary called *city_temps* that stores the cities as the keys and the *avg_temps* as the values.
